

Surrounded by numerous hot thermal springs, thermal geysers and boiling mud, Pure Source realised a long time ago that the healing wonders of mud were numerous and world renowned. Rotorua Thermal Mud is sourced from our local, natural, thermal environment. It is unique and only present in a small part of the world where thermal activity connects with its surrounding native flora and fauna.

Pure Source mud differs from other mud products due to its very high mineral content, giving it superb cleansing qualities. The numerous Manuka plants surrounding the mud pools add to the beneficial properties.

Rotorua Thermal Mud contains a range of trace elements, like Sulphur, Calcium, Sodium and Silicon. These minerals are known to be very effective in boosting the natural processes of the skin, they can also help ease aches and muscle pains and provide a wonderful feeling of tranquility.
